Introduction to Artificial Intelligence Project Proposal – Cover Page

Project Title:	Communication & Internet Technology	Intake: APU1F2006CS(IS)
	Name	**Designation/Role**
G. Leader	Sia De Long	Programmer
Member	Chieng Shoa Wei	Knowledge Engineer
Member		

Project Environment & Scope
(Please provide a detailed breakdown of areas to be implemented)

1) This project is implemented for: (Provide brief explanation)

Followed by the rapid growth rate of technology, there are some problem which need to face by the society including **high installation cost to build a desired own network** and **lack of knowledge to secure data within their network.** Therefore, this project is implemented to developed a chatbot which is able to access to an expert system containing knowledge base of Communication and Internet Technology in order to teach or give advice in this particular field to the society so that the problem can be overcome.

2) Is an expert system suitable for the problem area?

An expert system is definitely suitable to solve this problem area because expert system can mimic human expert in the particular field to teach and give advice to the users.

3) Is there a need for such a system? Justify.

This system is need for society such as it can let more people understand how latest technology connect together and increase their awareness on securing their own personal data.

4) This is a system for novice level users.

This is because the system is designed mainly to users who are newly or lack of knowledge within the domain in order to teach or to give advice to the users in nearly similar way with human expert. Eventually, user will be able to good use of this technology
